### Practice Focus

Mechanical Engineering, Design, Patent & Design Valuation

Ajay handles patent drafting, and prosecution within the areas of mechanical, automobile, aeronautical engineering, and thermal engineering. He also has experience in handling patent matters in diverse technology areas of mechanical engineering, automotive components and accessories, automotive lighting, fuel tanks, suspension systems, air-conditioning systems, hybrid drive technology, airbags, exhaust systems, control panels, and IC engines.

He is proficient in managing patent matters related to automobile transmission system, automotive steering, HVAC system components like compressors, condensers, pumps, IC Engines, power plant systems, gas turbines, steam turbines, heat exchangers, wind energy systems, solar energy technologies, fuel injection systems, Air Separation Units (ASU), Electric Vehicles (EVs), Thermal Energy Storage (TES) system, nanofluids, exhaust systems, renewable and non-renewable energy sources, medical devices, home appliances, diagnostic kits, sanitizing systems, respiratory masks, and electromechanical devices.

His extensive knowledge in these areas enables him to deliver exceptional patent services across a wide range of industries and technological domains.
