Gurgaon

Practice Focus

Mechanical Engineering

Shivam handles patent drafting and prosecution in the automotive and thermal systems domains. His work has encompassed the preparation of detailed patent specifications, claims, and associated technical documentation.

He is actively involved in the prosecution of Indian patent applications, including preparing responses to First Examination Reports (FERs), formulating hearing strategies, drafting written submissions, and advising clients on addressing objections raised by the Patent Office. He also conducts comprehensive patentability searches in the mechanical domain to assess the novelty and inventive step of proposed inventions.

He also manages prosecution-related matters for both Indian and international jurisdictions, ensuring procedural compliance and maintaining effective communication throughout the examination process.

In his previous roles, Shivam worked as a Mechanical Design Engineer, where he contributed to the development and optimization of solar thermal systems, focusing on design refinement and performance improvement. His technical experience includes 3D modeling and design using SolidWorks, as well as simulation and analysis using ANSYS.
