triven_consultant@knspartners.com

Bangalore

Practice Focus

Mechanical Engineering

Triven handles patent drafting and prosecution in the automotive and thermal systems domains. His work includes preparation of detailed patent specifications, claims, and associated technical documentation.

He is actively involved in the prosecution of Indian patent applications, including drafting responses to First Examination Reports (FERs), formulating hearing strategies, preparing written submissions, and advising clients on addressing objections raised by the Patent Office. He also conducts patentability searches in the mechanical domain to assess the novelty and inventive step of proposed inventions.

He manages prosecution-related matters for both Indian and international jurisdictions, ensuring compliance with procedural requirements and maintaining effective communication throughout the examination process.

In his previous roles, he worked as an SAP consultant and as a production supervisor. As an SAP consultant, he was involved in implementing vendor and customer codes and working on reconciliation accounts. As a production supervisor, he managed production operations and quality activities related to manufactured products.
